

Assignment 2: Weekly Progress Report

Name: Manoj A B

Reg No: 24UG00520

Week 3 Report

Activities Completed

This week I did model evaluation part. I checked accuracy, precision, recall and F1 score for both logistic regression and random forest. The random forest giving better result but still not final because I think data need some more tuning.

I also made confusion matrix and ROC curve, but I am not fully satisfied with the graph design, I will fix that next week. The code for saving ROC image is not working yet, I need to check that part.

I started doing feature importance checking. The most important features looks like team FIFA ranking and goal difference, but need to verify with coach data too. Visualization part not fully done, I only made bar chart for few columns.

I also wrote small summary about the model results, but it is not completed yet. Plan to do final version next week.

Outcomes

The model giving around 78% accuracy now which is okay but maybe can improve after tuning. Random forest looks good one.

I got basic visualization done and feature ranking output. Still missing proper figure captions and report formatting.

Some files are messy now, I will clean and organize before submission. Code comments also need to be added.

Pending Work

- Finish all visualization and export graphs properly.
- Improve report formatting and grammar check.
- Add comments to code and push everything to GitHub repo.
- Verify all evaluation metrics are correctly printed.
- Start working on week 4 tasks next week (final prediction and app integration).
